EXPERIMENT-7

Integrating a Zoho Creator Application with Another Zoho Service Using Connections and APIs

Aim:

To integrate the Insurance Claim application in Zoho Creator with Zoho CRM using connections and Deluge scripting to transfer customer details automatically.

Algorithm:

1. Open Zoho Creator: Log in to Zoho Creator and open the existing Insurance Claim application.

2. Create a Connection: Navigate to Microservices → Connections and create a new connection to Zoho CRM with the required permissions.

3. Authorize the Connection: Select the appropriate Zoho CRM account and authorize Zoho Creator to access the CRM Contacts module.

4. Create a Workflow: Open the Customer Details form and create a workflow that executes after successful form submission.

5. Configure Deluge Script: Add a Deluge Script action to the workflow to collect the customer name, email address, and mobile number from the submitted form.

6. Prepare Contact Data: Store the collected customer details in a map using the corresponding Zoho CRM field names, such as `Last_Name`, `Email`, and `Phone`.

7. Call the CRM API: Use the `zoho.crm.createRecord()` integration task with the Contacts module and the authorized connection to send the customer details to Zoho CRM.

8. Process the Response: Capture the response returned by Zoho CRM and display or log it to verify whether the contact was created successfully.

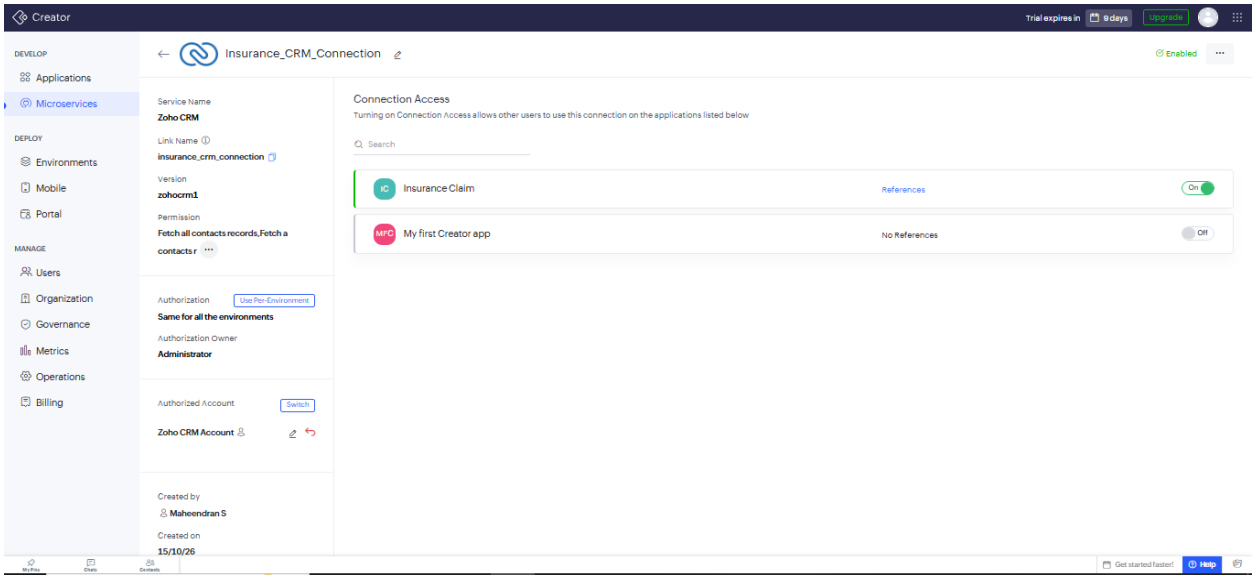

9. Submit Test Data: Enter sample customer details in the Customer Details form and submit the form to trigger the workflow.

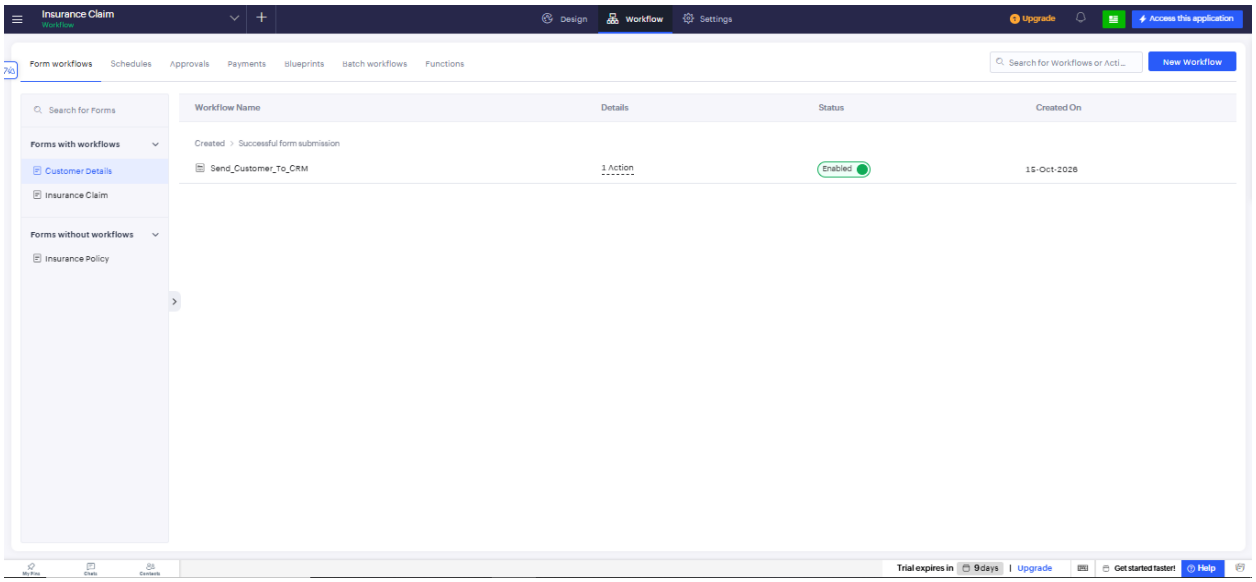

10. Verify the Integration: Open Zoho CRM, navigate to the Contacts module, and search for the test customer.

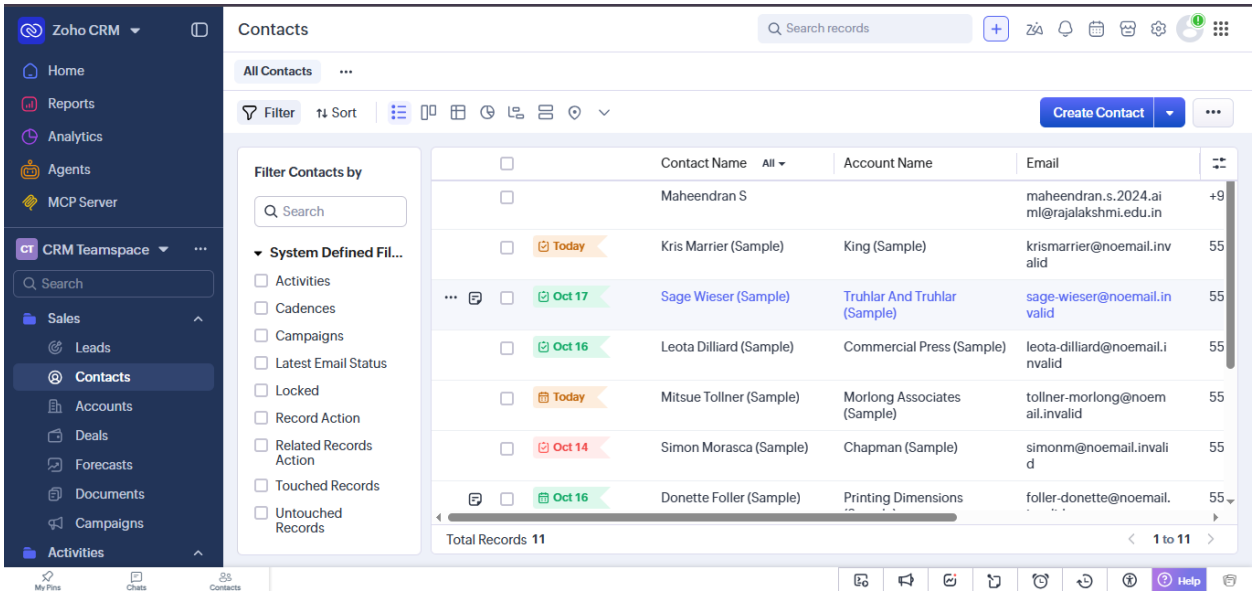

11. Confirm the Result: Check that the customer details have been transferred correctly and that the new contact appears in Zoho CRM.

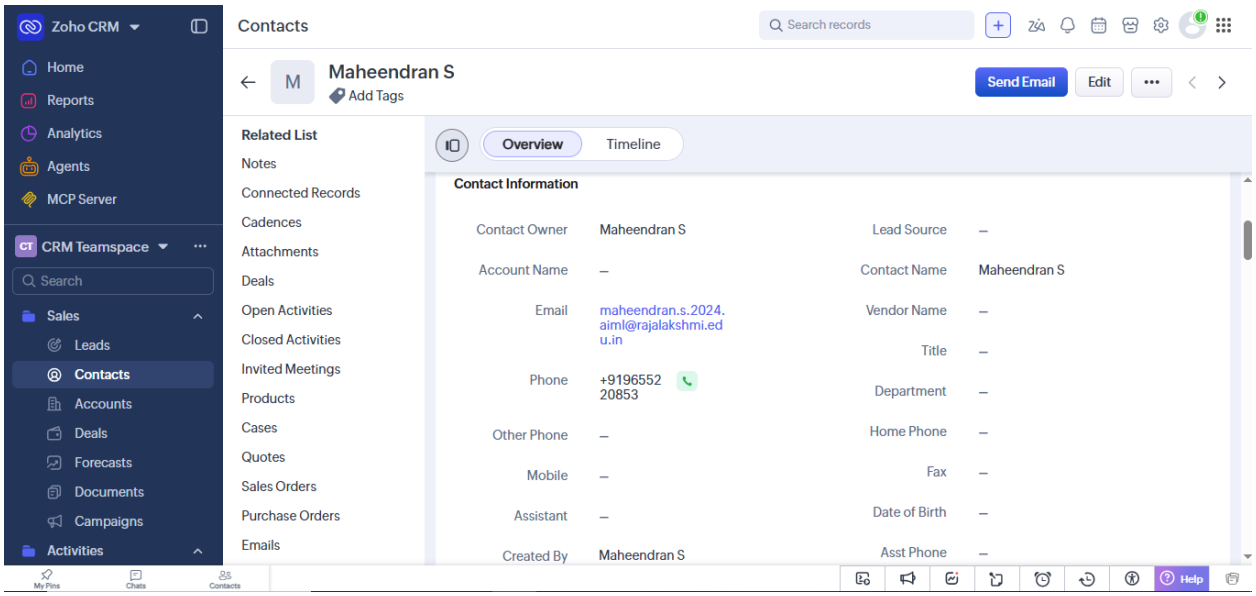

12. Complete the Experiment: Save the workflow configuration and record screenshots of the connection, Deluge script, and successfully created CRM contact as evidence of integration.

Result:

The Insurance Claim application was successfully integrated with Zoho CRM using a connection and Deluge scripting. Customer details entered in Zoho Creator were automatically transferred to the Zoho CRM Contacts module.
