EXPERIMENT-5B

Insurance Claim Dashboard Page

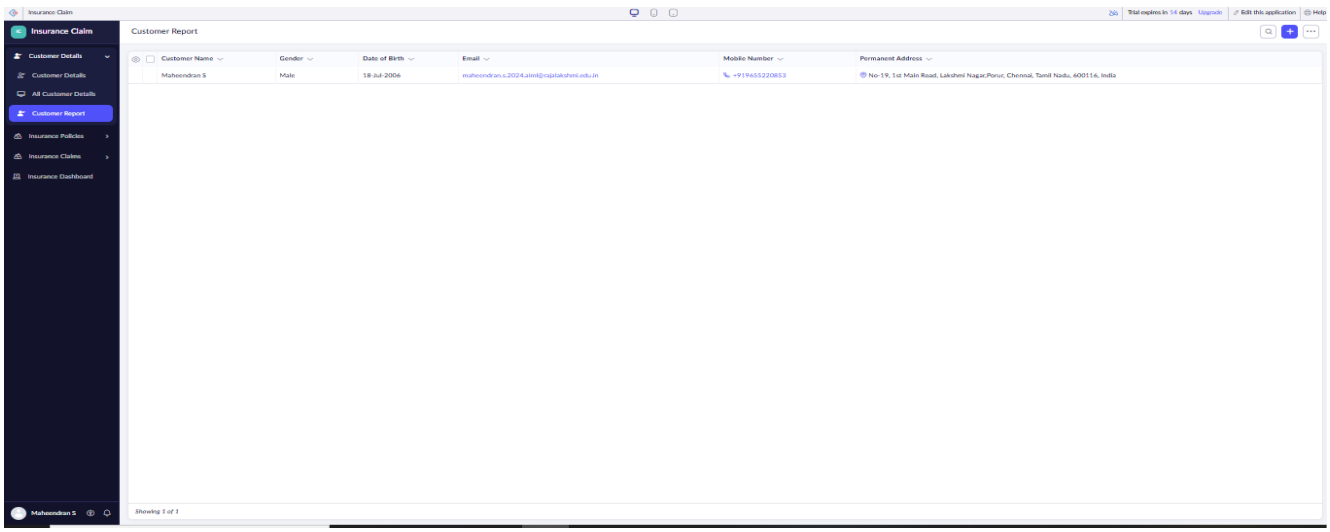

Aim:

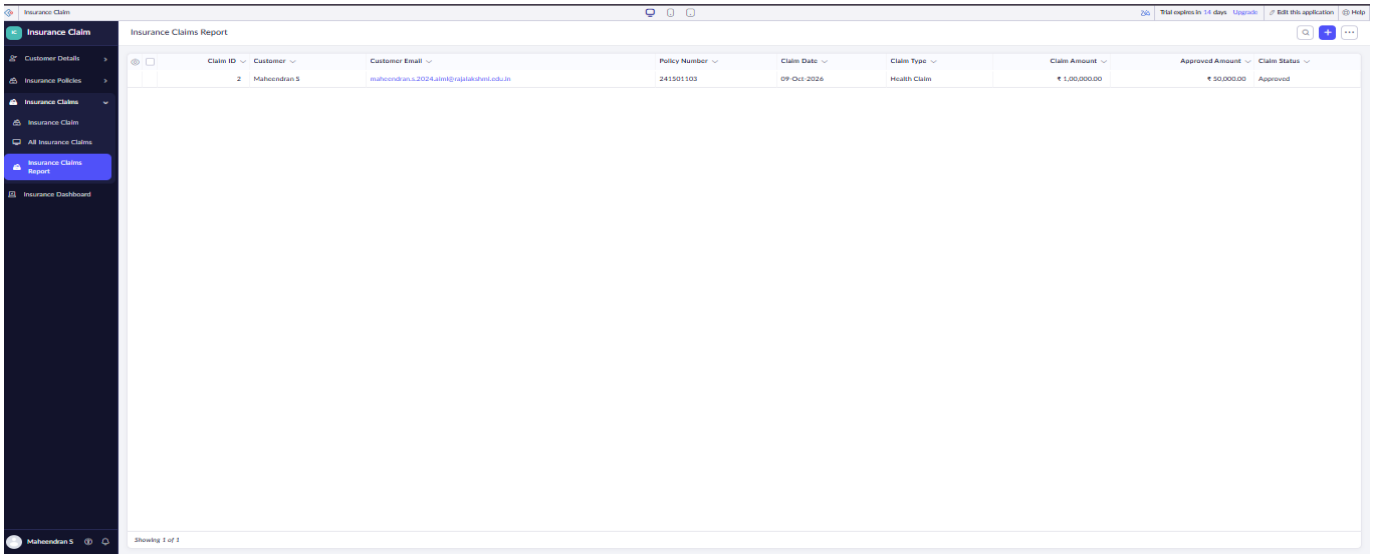

To create reports, charts, and an interactive dashboard using Zoho Creator UI Builder for the Insurance Claim Application to monitor customer details, insurance policies, and insurance claims.

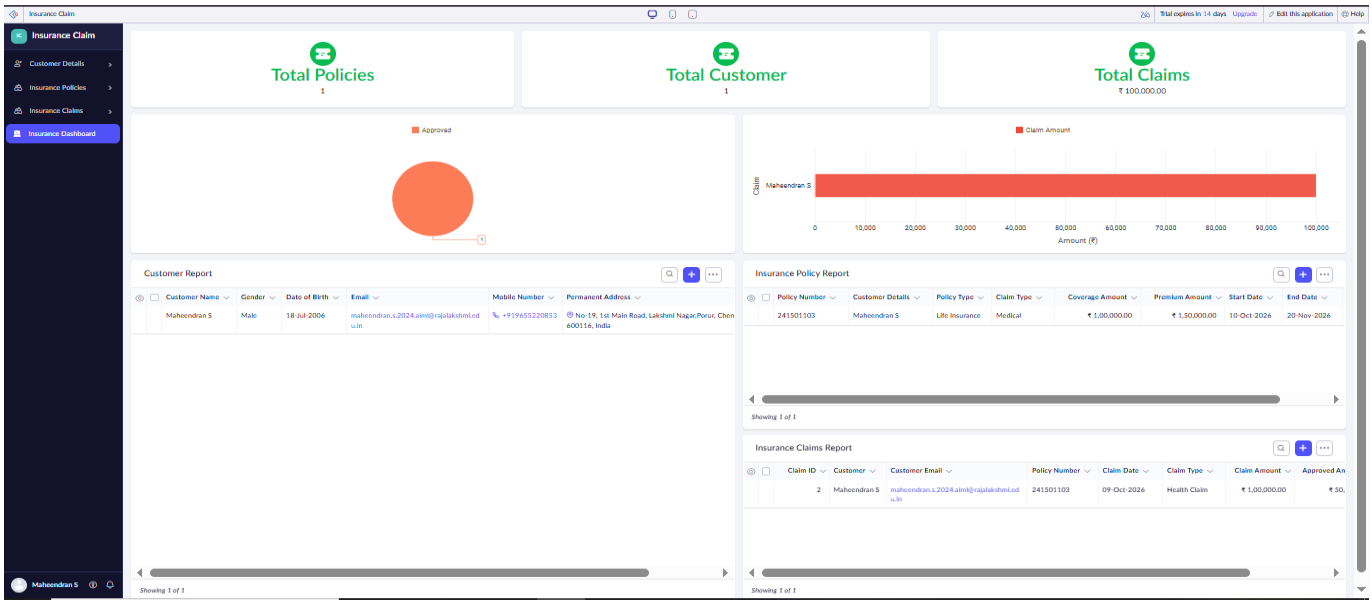

Algorithm:

1. Open the existing Insurance Claim application in Zoho Creator.
2. Create reports for Customer Details, Insurance Policies, and Insurance Claims.
3. Customize the reports by selecting the required fields and arranging them in a suitable layout.
4. Open UI Builder and create a custom page named **Insurance Dashboard**.
5. Add summary panels to display the total number of customers, total number of policies, and total claim amount using live data.
6. Create a pie chart to visualize insurance claims by status.
7. Create a bar chart to display claim amounts grouped by customer.
8. Embed the Customer Report, Insurance Policy Report, and Insurance Claims Report into the dashboard.
9. Arrange the panels, charts, and reports to create a clear and user-friendly dashboard.
10. Save the dashboard and verify that the reports, charts, and summary values display the application data correctly.

OUTPUT:

Result:

Thus, the reports, charts, and custom dashboard for the Insurance Claim Application were successfully created using Zoho Creator UI Builder. The dashboard displays customer details, insurance policies, insurance claims, summary values, and graphical representations of claim data using live application records.
