EXPERIMENT-9

Exploring AI-Assisted Features and Built-in Analytics (Zia) in Zoho Creator

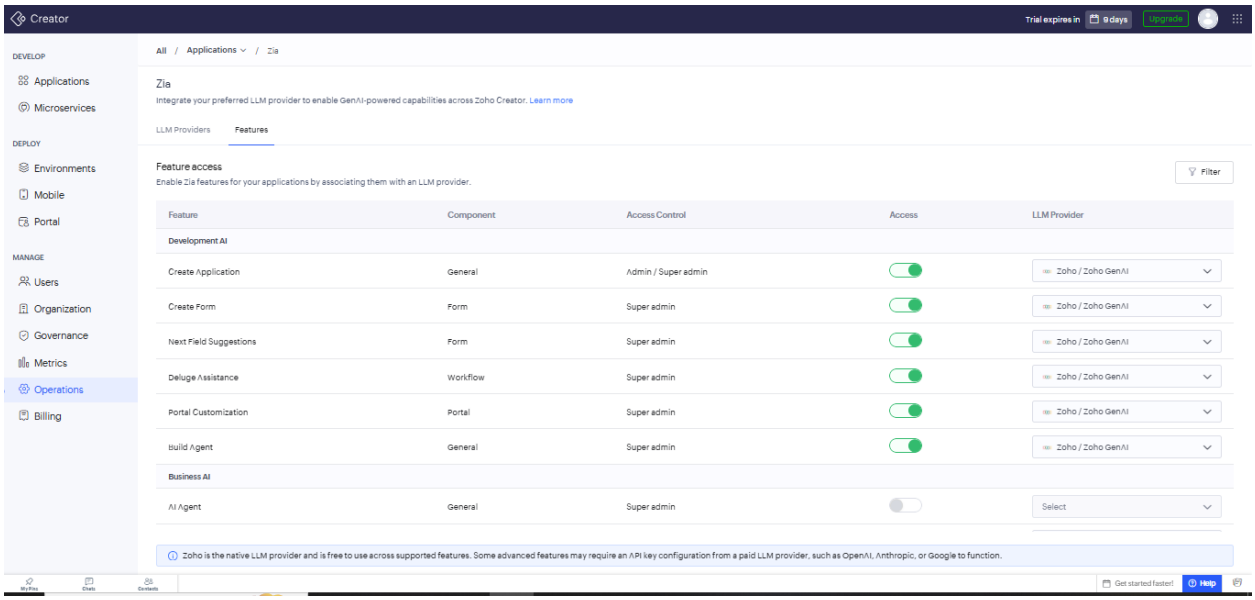

Aim

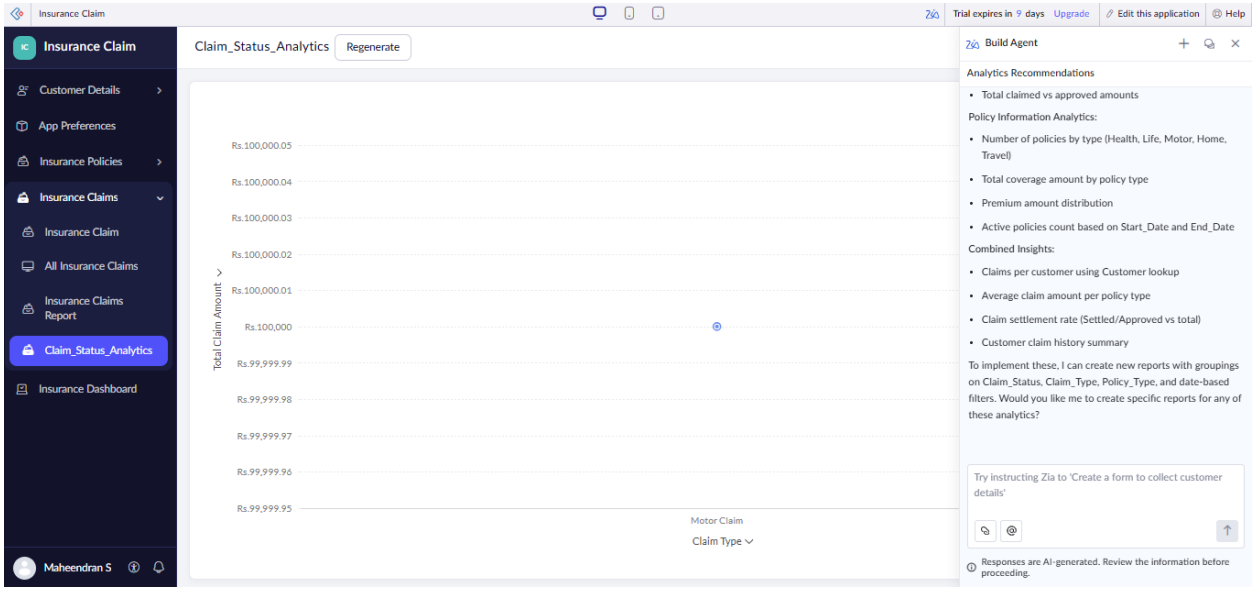

To explore Zia AI-assisted features and built-in analytics in Zoho Creator by generating Deluge scripts and visualizing insurance claim data using Pivot Charts.

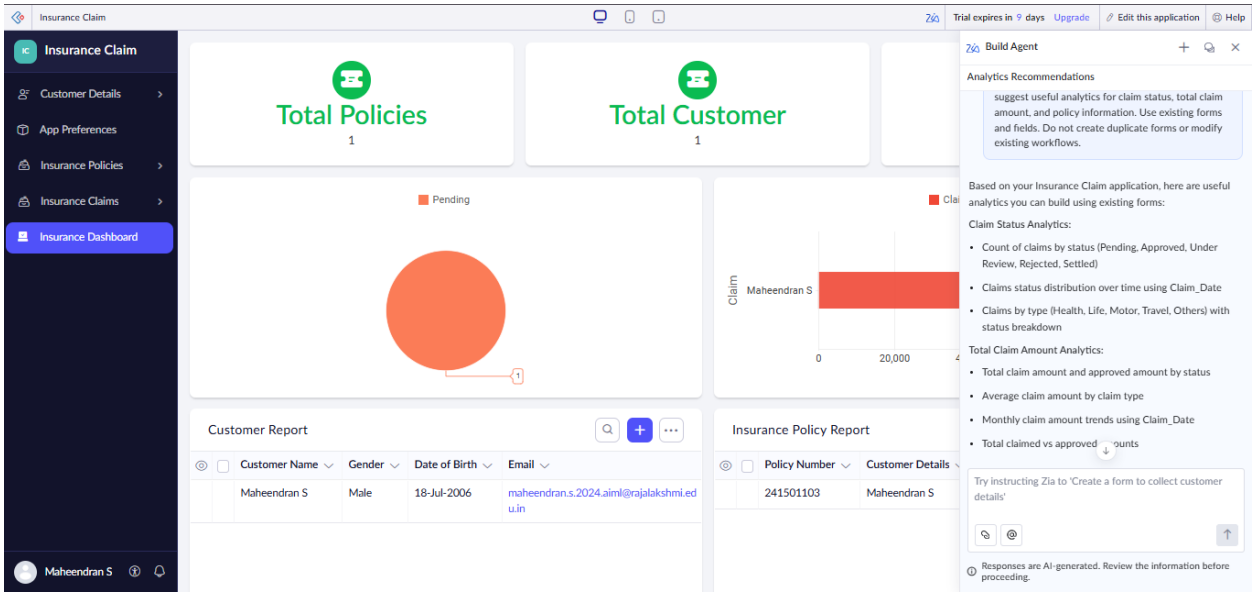

Algorithm:

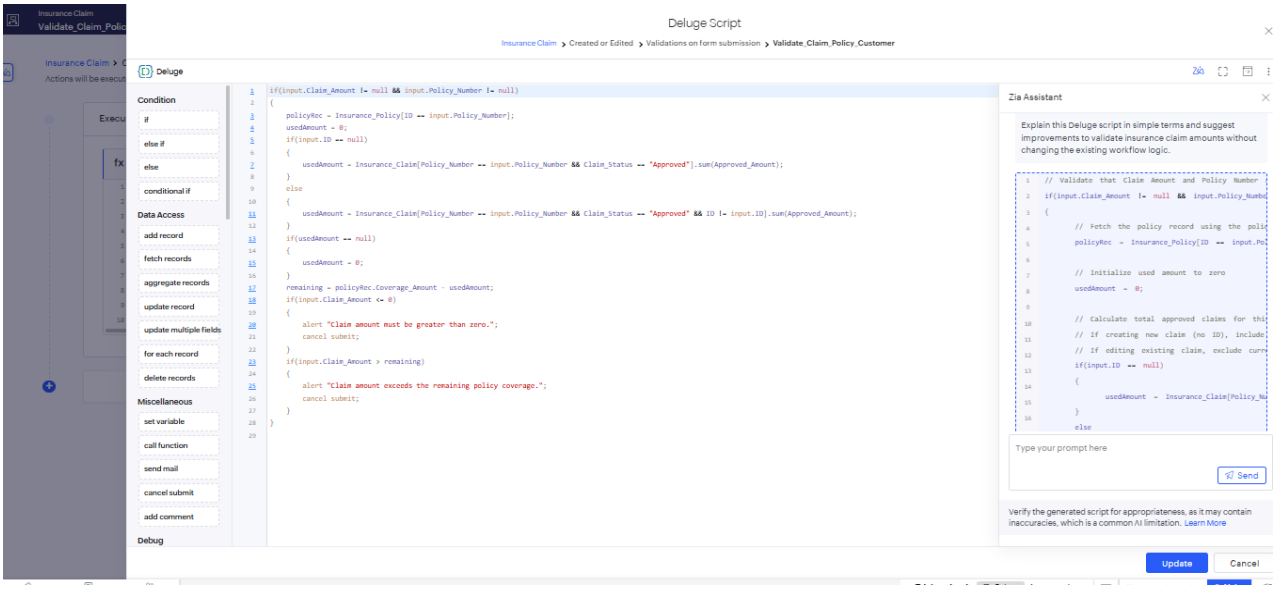

1. Open the existing Insurance Claim application in Zoho Creator.
2. Navigate to Settings → Zia → Features.
3. Check the available AI-assisted features and confirm that Deluge Assistance is enabled.
4. Open the existing `Validate_Claim_Policy_Customer` workflow.
5. Access the Deluge script editor.
6. Use Zia Deluge Assistance to generate or explain the insurance claim validation script.
7. Review the generated script for validating claim amounts and policy coverage.
8. Verify that the script checks whether the claim amount is greater than zero.
9. Check that the script calculates the total approved claims for the selected policy.
10. Calculate the remaining policy coverage by subtracting approved claims from the total coverage amount.
11. Verify that the script prevents claims exceeding the remaining coverage.
12. Create a Pivot Chart using existing Insurance Claim data, with Claim Type on the X-axis and Claim Amount on the Y-axis.
13. Save the chart and verify the generated visualization.

Analytics Recommendations
Total claimed vs approved amounts
Policy Information Analytics:
Number of policies by type (Health, Life, Motor, Home, Travel)
Total coverage amount by policy type
Premium amount distribution
Active policies count based on Start_Date and End_Date
Combined Insights:
Claims per customer using Customer lookup
Average claim amount per policy type
Claim settlement rate (Settled/Approved vs total)
Customer claim history summary
To implement these, I can create new reports with groupings on Claim_Status, Claim_Type, Policy_Type, and date-based filters. Would you like me to create specific reports for any of these analytics?

Analytics Recommendations
suggest useful analytics for claim status, total claim amount, and policy information. Use existing forms and fields. Do not create duplicate forms or modify existing workflows.
Based on your Insurance Claim application, here are useful analytics you can build using existing forms:
Claim Status Analytics:
Count of claims by status (Pending, Approved, Under Review, Rejected, Settled)
Claims status distribution over time using Claim_Date
Claims by type (Health, Life, Motor, Travel, Others) with status breakdown
Total Claim Amount Analytics:
Total claim amount and approved amount by status
Average claim amount by claim type
Monthly claim amount trends using Claim_Date
Total claimed vs approved amounts
Try instructing Zia to 'Create a form to collect customer details'
Responses are AI-generated. Review the information before proceeding.

Result

Zia AI-assisted Deluge Assistance was explored in Zoho Creator to generate insurance claim validation logic. The script checks claim amounts and remaining policy coverage. A Pivot Chart was also created to visualize claim data, demonstrating the use of AI-assisted features and built-in analytics in the Insurance Claim application.
