EXPERIMENT-6

Workflow Automation Using Deluge in Zoho Creator

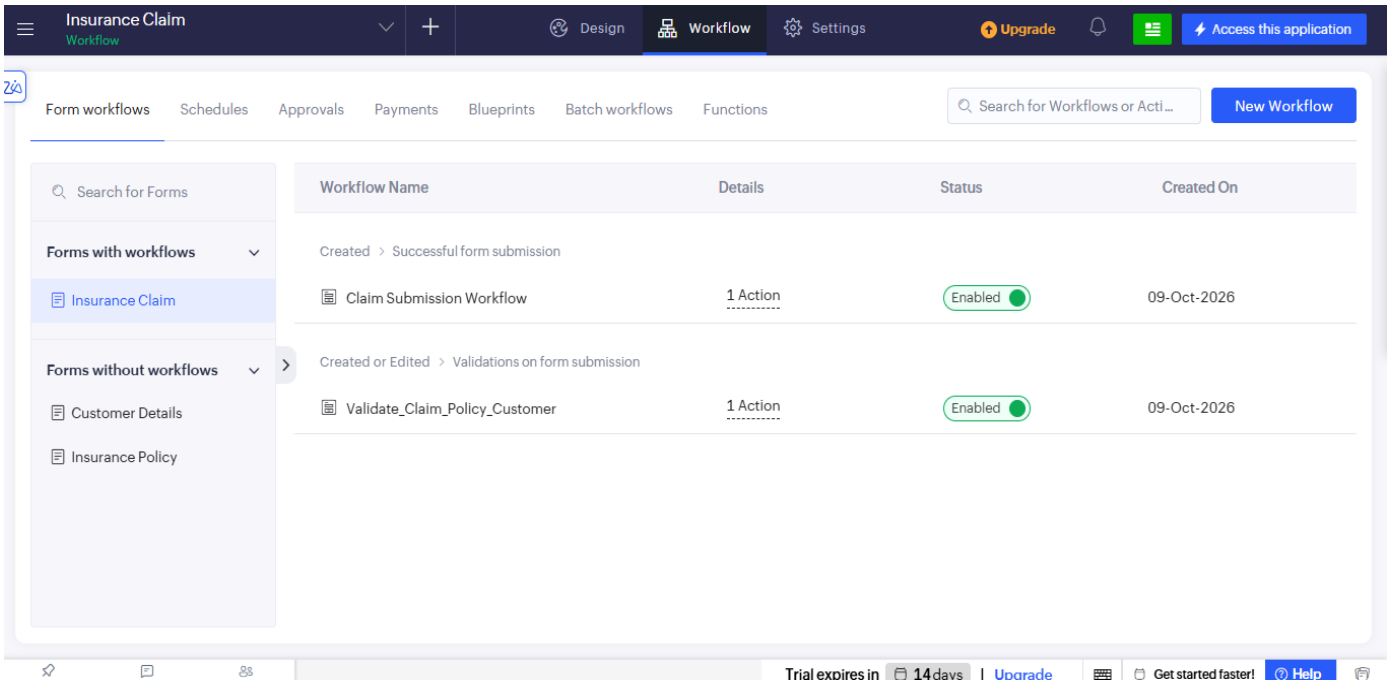

Aim:

To implement workflow automation in Zoho Creator using Deluge scripting to validate insurance claims and send email notifications after successful claim submission.

Algorithm:

1. Open the Insurance Claim application in Zoho Creator.
2. Create the required forms for customer details, insurance policies, and insurance claims.
3. Configure the Validate_Claim_Policy_Customer workflow to verify that the selected insurance policy belongs to the selected customer.
4. Use Deluge scripting to reject claims when the selected customer and policy do not match.
5. Configure the Claim Submission Workflow to send an email notification after successful claim submission.
6. Test the workflows using valid and invalid customer-policy combinations.
7. Verify the validation results and email notifications.

OUTPUT:

Deluge Script

Insurance Claim > Created or Edited > Validations on form submission > **Validate_Claim_Policy_Customer**

Deluge

Condition

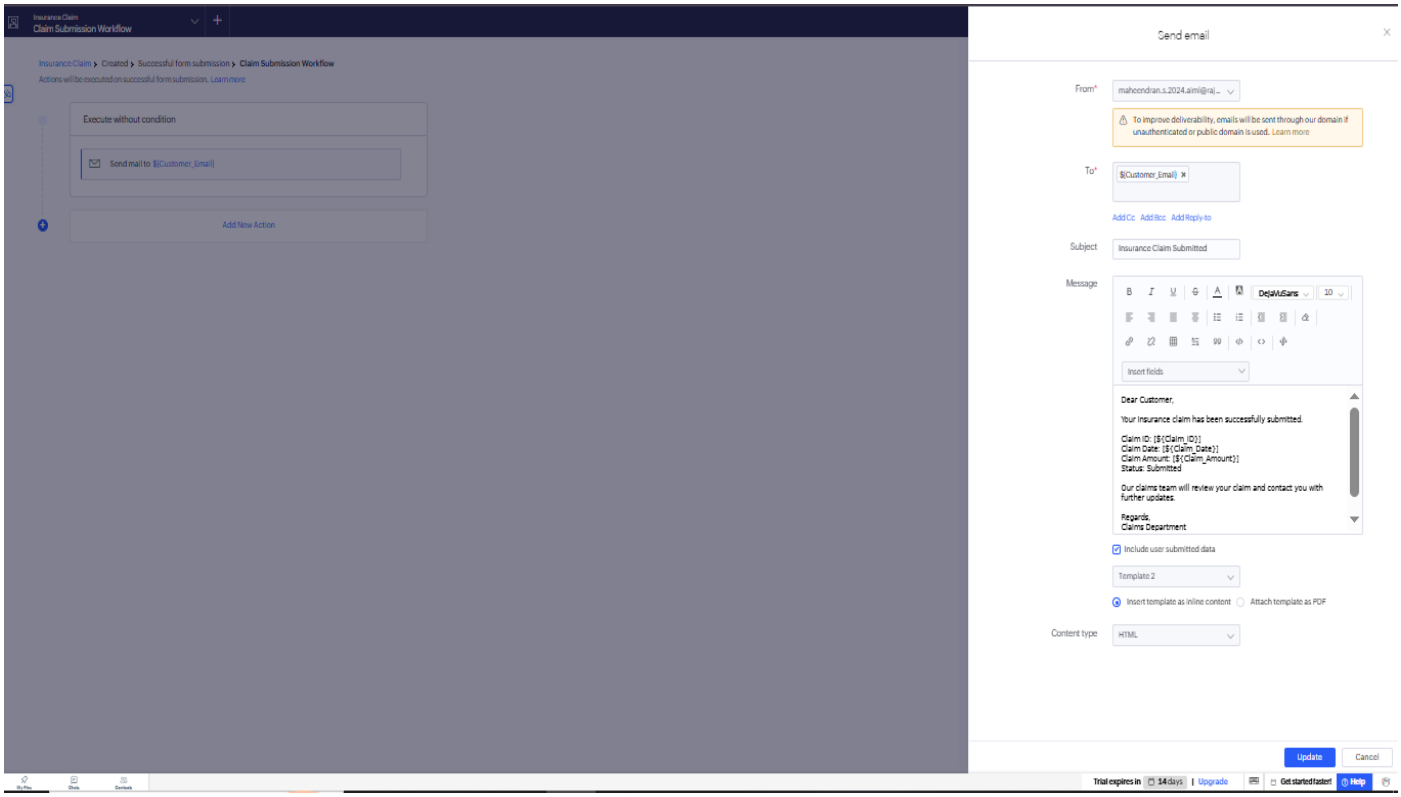

- if
- else if
- else
- conditional if

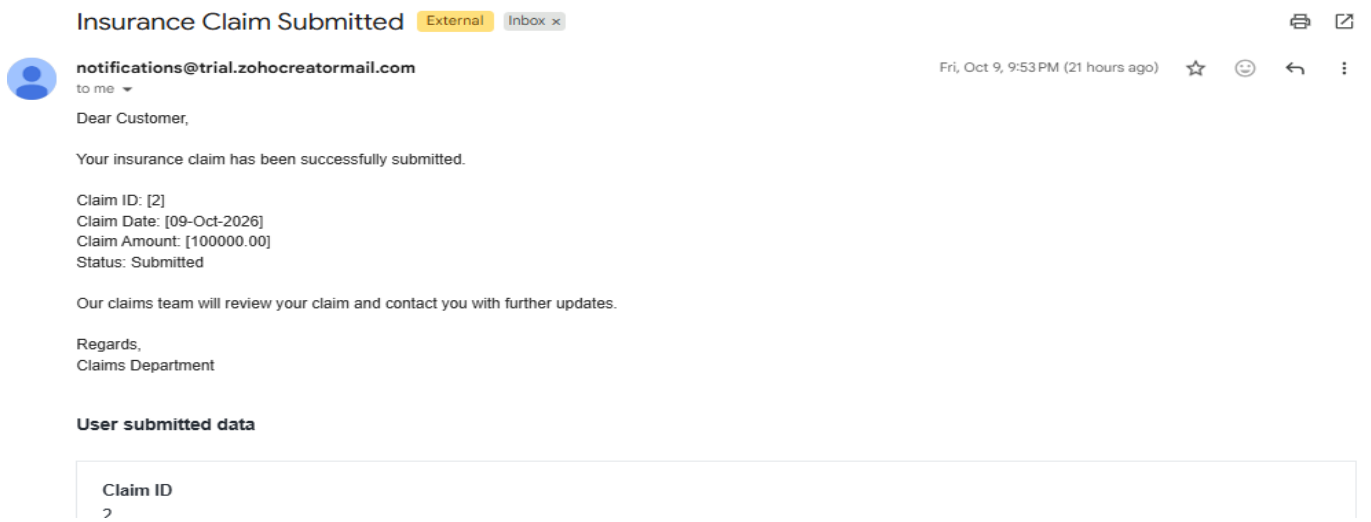

Data Access

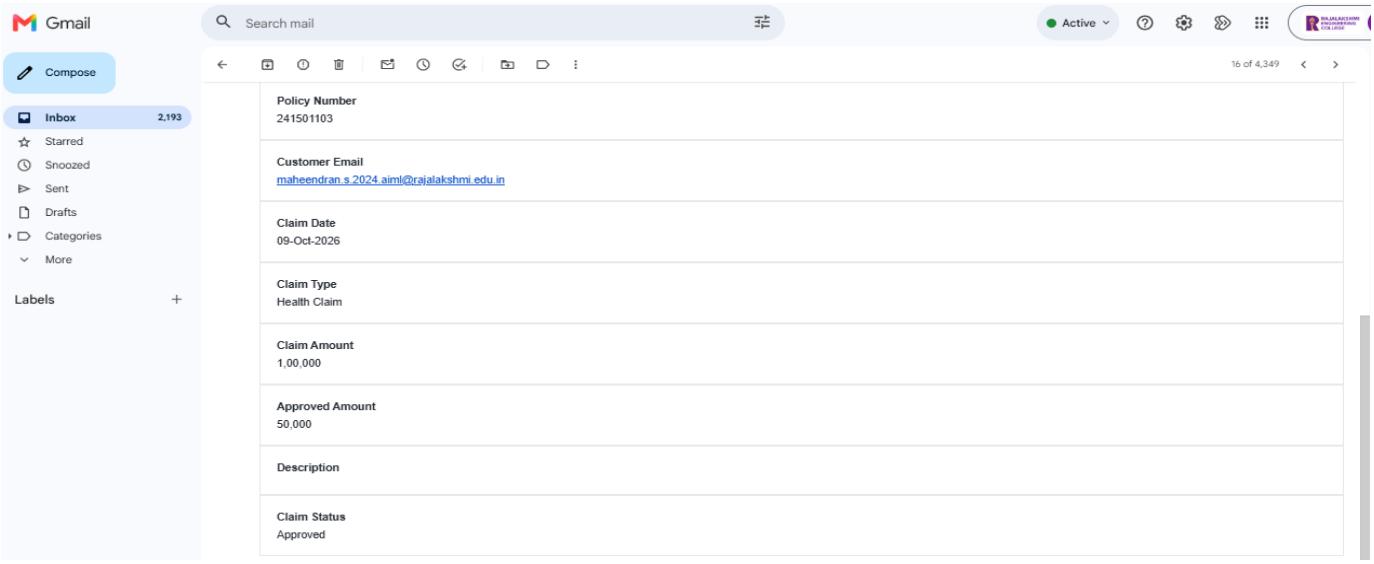

- add record
- fetch records
- aggregate records
- update record
- update multiple fields

```
if(input.Claim_Amount != null && input.Policy_Number != null)
{
    policyRec = Insurance_Policy[ID == input.Policy_Number];
    usedAmount = 0;
    if(input.ID == null)
    {
        usedAmount = Insurance_Claim[Policy_Number == input.Policy_Number && Claim_Status == "Approved"].sum(Approved_Amount);
    }
    else
    {
        usedAmount = Insurance_Claim[Policy_Number == input.Policy_Number && Claim_Status == "Approved" && ID != input.ID].sum(Approved_Amount);
    }
    if(usedAmount == null)
    {
        usedAmount = 0;
    }
    remaining = policyRec.Coverage_Amount - usedAmount;
    if(input.Claim_Amount <= 0)
    {
        alert "Claim amount must be greater than zero.";
        cancel submit;
```

Update Cancel

Result:

Workflow automation was implemented successfully in Zoho Creator using Deluge scripting. The system validates customer-policy combinations, prevents invalid claim submissions, and sends email notifications after successful submissions.
